

Modular Extraction Canopies – Instructions Manual

SYMBOLS UTILIZED IN THIS MANUAL

Read the instructions before using the equipment.

Important Safety Instructions. Hazard Risk in case of no compliance.

Useful guideline for the user.

Instructions for certified technician only.

1. Safety and Appropriate Use

1.1. Safety Instructions

The equipment is safe to use and complies with the European safety norms in Effect. However, the inappropriate use can lead to personal injuries and material damage. To insure a correct and safe functioning, please read this manual before first use. This manual contains important warnings about installation, safety, usage and maintenance required by this equipment.

Keep this manual for future reference. Deliver the manual along with the equipment in case of passing it to a new owner.

The manufacturer cannot be held accountable by damages resulting of inappropriate use and installation. Please note that the instructions of this manual do not substitute the technical characteristics engraved in the characteristics plate fixed on the equipment.

Read carefully the safety instructions!

Ensure sufficient ventilation in the room where the Canopy is being used at the same time with gas/other fuels burning equipment.

The installation and maintenance interventions must comply with the regional and national norms in Effect.

While installing the equipment make sure the weight is distributed evenly by every fixing point. Check fixing area to make sure there is no risk of detachment.

Before using the equipment check for visible eventual damage. Never use a damaged equipment!

To prevent the risk of damaging the equipment, verify that the power supply voltage and frequency complies with the specifications indicated in the characteristics plate.

This equipment is supplied with an equipotential connecting terminal, in the upper part, which must be properly connected with the earthing circuit by a certified technician.

This equipment is part of an exhaust system, which is complemented by a ventilation motor and an element of command to which will be connected the light bulb. Other installations methods are not foreseen.

Only properly qualified and certified technicians may conduct the installation and maintenance of the equipment. The manufacturer is not responsible for damage resulting of maintenance and other interventions conducted by unqualified technicians.

Do not make fire under the Canopy.

Always keep the equipment clean. Clean according to the recommendations supplied in this manual. **Fire Hazard!**

Risk of Burn Injuries! Do not open the oil drainage valve while the equipment is still hot.

1.2. Purpose of Use

The Inclined and Rectangular Canopies were conceived to collect the vapours resulting from cooking. The manufacturer does not advise any other use, non compliance of this may compromise the safety of the equipment and the user.

The Canopies are meant for commercial use.

Do not use the equipment outside.

1.3. User Requirements

The equipment must be maintained out of reach of children, which must be supervised in order to assure they do not play with the equipment.

1.4. Recycling

Packaging material: Before first use remove all plastic protections from the equipment. All packaging and protection materials are recyclable.

Verify the safe elimination of all plastic packaging. Maintain all packaging materials out of reach of children. Choking Hazard!

The electric and electronic equipment contain materials that, when wrongly used, may danger human health and the environment.

Do not deposit any part or component of the equipment in domestic waste containers. Deposit them in industrial collecting centres, contact your supplier or local authorities for advice.

2.

2.1. General Characteristics:

- Stainless Steel Construction;
- Stainless Steel Filters 400x400x20 for the 700 depth.
- Stainless Steel Filters 400x500x20 for the 900/1100/1400 depths.
- Oil Extraction Valve;
- With LED lighting;
- Without motor;

K	One Hole Screw Ph 4,8x32mm + Screw Protection
L	Hexagon Nut M6 inox
M	Top Side Cover

3. Installation

3.1. Assembly Instructions:

- a. Remove the equipment from the wood structure and, after that, the stainless-steel protection film carefully to avoid scratching the surface;
- b. Remove the filters and the partitions as indicated by the picture 2 (pull the filter immobilizer to release);

Picture 2

- c. Move the Canopy with the aid of a fork lifter, insert the forks under the pallet and move, making sure the cargo is well balanced;
- d. Do not pull or push the equipment to avoid damage or the risk of falling on the ground;

Canopies made from more than one element.

The Inclined and Rectangular Canopies allow for modular assembly with other Canopies from the same model!

- e. Remove the side cover from the side in which is intended to make the union. See picture 3;

Picture 3

- f. Place both modules side by side, making sure the screw holes are aligned and tighten the screws supplied with the union kit. See picture 4;

Picture 4

- g. In the end place the bits in the union area of the Canopy. See picture 5;

Picture 5

Picture 6

- j. Place the Canopy over the stove for which is meant. Have in attention that the external dimensions of the Canopy must exceed the dimensions of the stove by a minimum of 200mm.
- k. The height of the lower part of the Canopy to the floor must be between 1850 and 2000 mm; the distance between the heating area and the lower part of the Canopy must be between 800 to 1000 mm.
- l. The supply and exhaust of air must be made through conducts destined exclusively to the Canopy and **must comply with applicable norms.**
- m. Mark the horizontal lines in the Wall and drill with the power drill to apply the bushings (not supplied);
- n. Fix the Canopy temporarily and mark the vertical lines in the wall and drill;
- o. **Fix the equipment so that it does not detach from the wall;**

Picture 7

Picture 8

Optional;

Recommended to 1100 Depths

- Tighten the mettalic bushings with the hook to the ceiling;
- Tighten the hooks with nuts in the upper corners of the Canopy, on the side opposing the wall;
- Lift the Canopy to the desired height and suspend by attaching the hooks previously applied;
- Adjust by screwing or unscrewing the nuts of the hooks applied in the front of the Canopy.

Picture 9

3.2. Electrical Connection:

Verify that the informations indicated in the characteristics plate of the equipment match the voltage and frequency of the power supply.

Connect the equipment to a command device with na earthing circuit!

Follow the norms in Effect in the country in which the installation occurs.

In the upper part of the equipment exists a connection terminal with the
Symbol  that allows for the equipotential connection between several devices.

Lighting Connection Diagram:

4. Maintenance

4.1. Cleaning:

	Control	Frequency	Preparation	Execution
Mettalic Structure	Visual	Depending on Use		Clean with a soft damp cloth, soaked in an alkaline detergent. In case of heavy soiling, or encrustation, use a wood or plastic scraper. <u>Do not direct water jets to the Canopy!</u>
Grease Filter	Visual	1x per Week	Remove the filters from the Canopy	Clean with hot water or on the washing machine with an alkaline detergent.
Grease Drainage	Regular	1x per Week	Open the drainage valve beneath the exhaust	Drain all the grease with the aid of a container. Do not execute this operation while the equipment is hot!

4.2. Replacement Parts:

	Identification	Substitution
Filter	400x400; 400x500	Remove the filter and substitute it for the new one.
Lighting	Consult the characteristics plate to identify maximum power; Confirm light dimensions on the light socket;	<ul style="list-style-type: none"> Release the stainless steel clips along the lighting socket. Turn the LED tube 90° and pull it down. Make sure the light complies with the connection diagram. Substitute the LED tube and replace the protection cover. Attention! Make sure the power supply is disconnected before executing the operation.

9. Warranty

- The equipment is warranted for a period of 12 months, from the date of purchase.
- The warranty is valid for manufacturing defects, be it of materials or the manufacturing process.
- Every time an anomaly is identified on the equipment, it must be returned promptly, along with the purchasing document or invoice.
- When the warranty is applied, the damaged parts will be replaced or repaired, according with the manufacturer decision. In case of substitution, the damaged parts must be returned to the manufacturer.
- The warranty excludes all defects and malfunctioning resulting from deficient installation or misuse of the equipment.
- The equipment will lose warranty when a modification or alteration made by the user is identified.
